Tangerang, Banten, Indonesia

PROFESSIONAL SUMMARY

Detail-oriented software and systems professional with hands-on experience designing, building, and maintaining full-stack web applications and IT infrastructure at Bina Nusantara University. Comfortable working across the entire stack — from backend APIs and relational databases to React frontends and Linux server administration. Proven ability to deliver production systems under tight deadlines and to collaborate cross-functionally on data-driven operational tools.

WORK EXPERIENCE

Operations & System Development Staff

Aug 2024 – Present

Bina Nusantara University · Alam Sutera Campus · Full-time

- Design and develop internal full-stack web systems to automate laboratory operations and reduce manual reporting overhead.
- Built **Ping!** — an AI-powered communication and reporting platform using RAG (Retrieval-Augmented Generation) that centralises lab support channels and reduces repetitive queries to the OSD team.
- Maintain Linux servers, Proxmox hypervisors, Nginx reverse proxies, and campus network infrastructure, ensuring high availability for academic and administrative services.
- Implement CI/CD pipelines with GitHub Actions and Docker to streamline deployments and minimise downtime during releases.
- Collaborate with faculty and operations stakeholders to gather requirements and iterate on system improvements.

EDUCATION

Bachelor's Degree in Information Systems

Expected Feb 2026

Bina Nusantara University · Alam Sutera Campus · GPA: 3.74

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, PHP, Python, Bash
Frontend	React, Next.js, Astro, Tailwind CSS, HTML/CSS
Backend & DB	Node.js, Express.js, MySQL, PostgreSQL, MariaDB
Infrastructure	Linux, Docker, Nginx, Proxmox, Git, GitHub Actions

PROJECTS

Ping! — Lab Communication & Reporting System

2026

Next.js · Tailwind CSS · Express.js · MySQL

- Centralised previously scattered communication channels for LCAS laboratory operations into a single platform.
- Implemented Ping! Bot, an AI assistant using RAG to resolve common issues instantly, cutting repetitive support requests.

Backup LCAS — File Management & Backup Platform

2025

Next.js · Tailwind CSS · Express.js · MySQL | Role: Backend Developer

- Engineered the backend API for a university-wide backup and file-management system serving students and faculty.

- Designed ticketing system for staff backup requests, reducing ad-hoc requests by providing a structured workflow.
- Miserease — Social Story-Sharing Platform2024

React · Tailwind CSS · TypeScript | Role: Backend Developer | GarudaHacks 4.0

 - Built backend services for a hackathon web app inspired by Social Comparison Theory, enabling users to share problems and find peer connection.

- Codehub — Programmer Community Website2024

HTML · CSS | Role: Frontend Developer

 - Developed a commercial community platform for programmers featuring weekly training sessions and skill exercises.
